Metasys N2 System Protocol Specification for Vendors Order Form

The Metasys N2 System Protocol Specification for Vendors describes the internal protocols used in the Metasys N2 Bus connection to an NCM and NAE. It details the methods and data structures required to read and write the *value* attribute of most objects.

The Metasys N2 System Protocol Specification for Vendors contains information necessary to connect a third-party system to the Metasys N2 Network. In many cases, however, it will not be the most functional or cost-effective means to achieve interoperability or data sharing between the Metasys Network and another system. Contact your assigned certification coordinator at Johnson Controls to learn about other connectivity options.

While the Metasys N2 System Protocol Specification for Vendors is believed to be accurate at the time of printing, Johnson Controls, Inc. does not guarantee the accuracy of the document, nor will it be held responsible for damages of any kind, direct or indirect, which may result from the use of the Metasys N2 System Protocol Specification, even in situations in which a Johnson Controls employee has examined your system. Further, you understand that the protocols described in the Metasys N2 System Protocol Specification are subject to change without notice.

The Metasys N2 System Protocol Specification for Vendors is provided free of charge. ***It is, however, copyrighted and may not be duplicated.*** Each copy must be ordered using this form.

Please send my copy of the Metasys N2 System Protocol Specification for Vendors to:

Name _____ Title _____
